

TASK - 1

linux Kernel Architecture

User Space

Library Interface

Kernel Space

Scheduler
Manages CPU
resources
allocation and
process scheduling

Memory
management
Handles
memory

File
System
Provides
Interface

Network
Stack
Implement
network

Process Scheduler : manages process execution.
Allocates CPU time effectively.

Memory management : Handles RAM allocation
Virtual memory and
paging.

File system : organize and handle file
Storage and access.

Network stack : Facilitates network
communication using standard
protocol.

Device driver : Enable communication between
kernel and hardware devices.
